ACKNOWLEDGEMENTS

The 1986 Hospital Bed and Discharge Data Book is the result of the joint efforts of the data providers and Massachusetts Department of Public Health personnel. The cooperation and assistance of the many individual hospitals who provided the information contained within this report deserve particular mention.

Department of Public Health staff who were most significantly involved in the production of this report include:

Victoria Vespe Ozonoff, Ph.D. - editor

Laurie Jannelli - data collection coordinator

Maureen Mata - document coordination and programming

Susan M. Schappert - publications coordinator

Bridget Nestor - typing and word processing

Also worthy of mention are our many data entry operators, under the supervision of Mary McLaughlin and Annie Boyd. In addition, Greg Hanna, Lynne Steinman, and Tillie Teixiera provided valuable computer expertise.

The joint efforts of the entire staff of the Health Resources Statistics Unit were necessary to produce this report. Special acknowledgement is made to all of them.

THE 1986 HOSPITAL BED AND DISCHARGE DATA BOOK

INTRODUCTION

This report presents Fiscal Year 1986 (FY86) utilization and discharge data for all hospitals in Massachusetts. The data in this report are based on hospital responses to the 1986 Annual Hospital Statistical Report (AHSR).

The 1986 Hospital Bed and Discharge Data Book includes the following bed utilization statistics for each reporting hospital: number of beds, census days, average daily census and occupancy rate. Utilization statistics are broken down by individual services within each facility. The discharge statistics are number of discharged patients, number of discharge days and average length of stay.

Aggregate data from Fiscal Year 1983 through Fiscal Year 1986 on total number of beds, average length of stay, and occupancy rates are included in this overview. These data are presented separately for acute, psychiatric, and chronic/rehabilitation hospitals.

BEDS

At the end of FY86 there were 38,376 hospital beds in Massachusetts, a decrease of 412 beds from the previous year. There were 169 hospitals: 117 acute hospitals (27,484 beds), 27 chronic hospitals (5,904 beds), and 25 psychiatric hospitals (4,988 beds). (Figure 1)

BEDS BY HOSPITAL TYPE

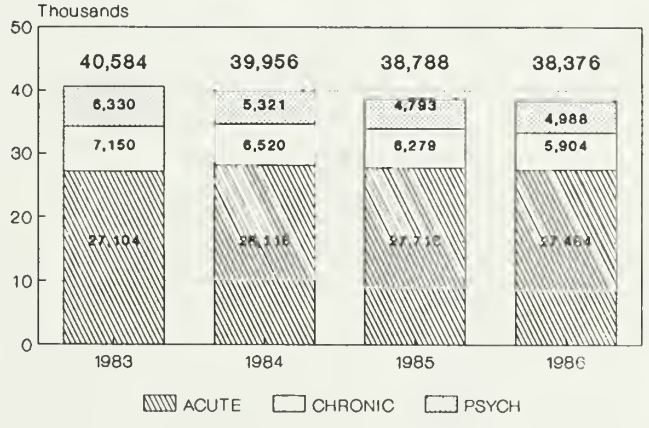

Figure 1

---

[1]The reporting period (fiscal year) runs from October 1 through September 30 for most hospitals. The most notable exceptions to this are the state facilities, whose fiscal year runs from July 1 to June 30.

[2]The figure for psychiatric beds (4,988) includes 150 beds not previously reported from the Plymouth, Attleboro, Taunton Facility (PAT) and the Charles River Adolescent Unit. These facilities merged with the New Bedford/Brockton Area Facilities in FY86. Together, they form a new administrative entity, the Taunton State Hospital.

Changes from FY85 to FY86 are summarized in Table 1.

MAJOR BED CHANGES FY86

HOSPITAL	BED LOSS	REASON
FRANCES P. MEMORIAL	60 BEDS	RELICENSED TO NURSING HOME
ST. CAMILLUS	68 BEDS	RELICENSED TO NURSING HOME
GROVER MANOR	161 BEDS	CLOSED
ALL OTHER FACILITIES	123 BEDS	DISTRIBUTED AMONG REMAINING HOSPITALS
TOTAL	412 BEDS	

Table 1

AVERAGE LENGTH OF STAY

The average length of stay in acute hospitals has decreased over the past three years. Chronic and psychiatric hospitals have shown more variability. (Figure 2)

AVERAGE LENGTH OF STAY BY HOSPITAL TYPE

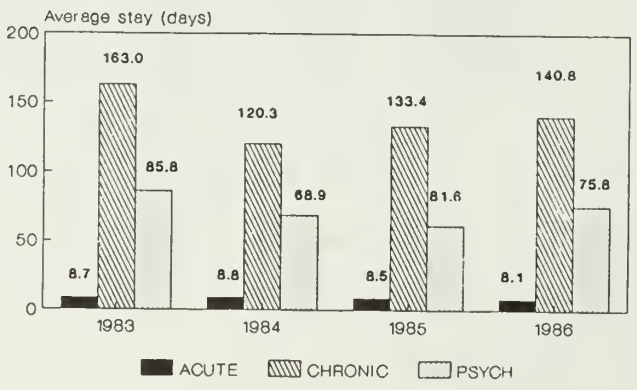

Figure 2

Lengths of stay within each hospital type vary according to patient age category. The length of stay of the 65+ age group is always highest and tends to bring up the total average length of stay. (Table 2)

AVERAGE LENGTH OF STAY BY AGE

YEAR	ACUTE			CHRONIC			PSYCHIATRIC		
	TOTAL	<65	65+	TOTAL	<65	65+	TOTAL	<65	65+
1983	8.7	6.9	12.7	163.0	95.9	236.2	85.8	72.8	164.9
1984	8.8	6.7	12.0	120.3	73.7	195.2	68.9	50.5	156.5
1985	8.5	6.3	11.7	133.4	93.4	152.1	61.6	43.3	175.3
1986	8.1	6.1	10.7	140.8	86.2	139.5	74.0	55.9	229.1

Table 2

In FY85 a third category, age 75 and older, was added to the Annual Hospital Statistical Report. The average length of stay for this age group is summarized in Table 3.

AVERAGE LENGTH OF STAY INCLUDING AGE 75 AND OLDER

YEAR	ACUTE				CHRONIC				PSYCHIATRIC			
	TOTAL	<65	65-74	75+	TOTAL	<65	65-74	75+	TOTAL	<65	65-74	75+
1985	8.5	6.3	11.1	12.5	133.4	93.4	99.2	249.1	61.6	43.3	204.3	62.1
1986	8.1	6.1	10.2	11.0	140.8	86.2	93.2	211.5	74.0	55.9	186.3	632.2

Table 3

OCCUPANCY RATES

Occupancy rates in acute hospitals for the past four years show a consistent decline, from 80% in Fiscal Year 1983 to 68% in Fiscal Year 1986. This trend was not evident for chronic and psychiatric hospital occupancy rates. (Table 4)

HOSPITAL OCCUPANCY RATES

YEAR	ACUTE	CHRONIC	PSYCHIATRIC
1983	79.6	83.5	83.9
1984	77.1	90.2	81.7
1985	72.8	90.3	89.3
1986	67.8	88.9	90.0

Table 4

This report presents summary statistics for all Massachusetts hospitals, including federal facilities and specialty hospitals such as the Shriner Burns Institute. When comparing data presented in this report with other sources, it should be remembered that the number of hospitals may vary according to the purpose of the analysis and the definitions used in the data collection process.

The following tables summarize the bed and discharge sections of the 1986 Annual Hospital Statistical Report. Requests for additional data or special tabulations should be directed to:

Victoria Vespe Ozonoff, Ph.D.

Boston, Massachusetts, 02111

---

[3] The majority of hospitals surveyed by the Health Resources Statistics Unit are licensed by the Commonwealth and are classified as acute care based on licensing requirements. For those hospitals not licensed by the Commonwealth, classification is based upon self-classification by the facility on the annual survey. For this reason, the number of acute care hospitals listed in this report differs from the number reporting to the Massachusetts Rate Setting Commission.

APPENDICES

APPENDIX I

GLOSSARY

UTILIZATION TERMS

Hospital

Any institution, however named, whether conducted for charity or for profit, which is announced, advertised, established or maintained for the purpose of caring for persons admitted thereto for diagnosis, medical, surgical or restorative treatment which is rendered within said institution. (Massachusetts General Laws, Chapter III, Section 52, 1972)

Admission

For acute, chronic and rehabilitation hospitals an admission is any documented entry into a 24-hour facility for the purpose of inpatient care and treatment. For psychiatric hospitals, an admission includes readmissions, returnees from extramural status and transfer or discharge commitments. It excludes returns from absences of seven days or less.

Patient Days

There are two types of patient days used in the preparation of this report: those calculated on a census basis (census days) and those calculated on a discharge basis (discharged patient days).

Census Day

This counts that period of service rendered to inpatients between the census-taking hours of two successive days. The day of discharge is counted only when the patient was admitted on the same day.

Total Census Days

For a hospital, these represent the total patient census provided by each unit in the facility for the entire reporting period - generally 365 days. The figure for total census days is based on the year's summation of individual units.

Average Daily Census (ADC)

This represents the number of patients in the facility on an "average" day. It is calculated as follows:

$$ADC = \frac{\text{Total Census Days}}{\text{\# Days in Reporting Period}}$$

Discharged Patient Days

This refers to the number of days of care, by service, rendered to inpatients who were discharged during the reporting period. This category also includes the days of care rendered to patients who were discharged due to death.

Total Discharged Patient Days

This is the summation of discharge days of the individual units.

Average Length of Stay (ALOS)

This is the average duration of inpatient stay in a facility. It is calculated as follows:

$$ALOS = \frac{\text{Total Discharged Patient Days}}{\text{Total Patients Discharged}}$$

(The two types of patient days differ in terms of time used in their recording. For example, Hospital A has a reporting period of October 1, 1982, through September 30, 1983. John Smith was admitted as an inpatient on September 1, 1982, and discharged on October 15, 1982. On a discharge basis, Mr. Smith would represent 44 patient days of care, but, on a census basis, he would account for only 14 days (October 1 - 14) of care.

For short-term services, the results of computations involving patient days (such as average length of stay) will vary little regardless of the type of patient day used. For long-term facilities, however, census days must be used to calculate the average daily census and occupancy rates. Discharged patient days should be used to calculate the average length of stay.)

Beds

Licensed Bed Quota
This is the total number of hospital beds the facility is authorized to operate by the licensing authority.

Operating Bed Capacity
The number of beds staffed and ready to receive inpatients.

Beginning and End Beds
The number of operating beds in the facility on the first and last day of the reporting period.

Mean Beds
These are determined by dividing the sum of the daily operating bed capacities by the number of days in the reporting period.

Occupancy Rate
The percent of beds occupied, on the average, during the reporting period. It is calculated as follows:

$$\text{Occupancy Rate} = \frac{\text{Total Census Days} \times 100}{(365)\ \text{Mean Operating Beds}}$$

(In short-term services, discharged patient days may be used to calculate occupancy rates if census days are not available.)

Missing Values
Although most facilities are able to provide complete information on their annual report, there are occasions when missing values are present. Missing values will appear as "UNK" on the tables. Occupancy rates have not been calculated for facilities unable to provide mean beds and/or census days. An average length of stay has not been calculated for any facility unable to provide total discharges and/or total discharged patient days. HSA and state totals for occupancy rate and length of stay have been adjusted to exclude those facilities providing partial or incomplete data.

ACUTE HOSPITAL TERMINOLOGY

Acute Hospital
A facility which provides general and specialized medical and surgical care to inpatients and in which 50% or more of the patients spend less than 30 days. Maternity and pediatric hospitals are included in this category. Beds in acute hospitals are generally organized into the units listed below:

Medical/Surgical Unit
Beds designed for short-term adult medical/surgical patients. All medical/surgical sub-specialties are included here unless specifically listed elsewhere or specifically designated as rehabilitation beds.

Intensive Care Unit (ICU)
A specially designated hospital unit in which special equipment and skilled personnel are concentrated for the care of seriously ill patients requiring immediate and continuous attention. In addition to general purpose medical/surgical ICUs, many hospitals have specialty units which include the following: separate medical and surgical ICUs, pediatric and neonatal ICUs, coronary care units, respiratory ICUs, and special

burn care and transplant units.

Pediatric Unit

A unit with beds for short-term pediatric care (age 21 or less). This includes cribs or bassinets unrelated to the maternity service. Facilities which provide pediatric care exclusively report all beds and utilization statistics under the "pediatrics" heading except for distinct bed complements designated for rehabilitation, psychiatric or long-term care for children or adolescents.

Maternity Unit

All beds located within the maternity unit regardless of whether used for maternity or clean gynecology. Bassinets and newborn statistics are not included in the maternity data.

Psychiatric Unit

Beds designated for a separate and distinct inpatient psychiatric unit.

Rehabilitation Unit

Although rehabilitation services are an integral part of all patient care, only beds designated to a distinct unit which is staffed and equipped for the primary purpose of providing inpatient rehabilitation, i.e., coordinated multidisciplinary physical and restorative services, are included in these statistics.

Long-term Care Unit

A long-term care unit within an acute hospital includes the following: a unit set aside as a skilled nursing facility (SNF or Level II) and certified as such for participation in Medicaid or Medicare; a unit set aside as an intermediate care facility (ICF or Level III) and certified for participation under Medicaid; a unit set aside as a residential care facility (RH, RCF or Level IV) of a chronic care unit where the average length of stay is 30 days or more. Excluded are rehabilitation or psychiatric units specifically defined elsewhere.

CHRONIC AND REHABILITATION HOSPITAL TERMINOLOGY

Chronic and rehabilitation hospitals

Included are those facilities providing skilled nursing and rehabilitation services to post-acute or chronically ill patients. The majority of these patients stay 30 days or more and require a greater concentration of equipment, services and skilled personnel than can be provided in a Level I/II skilled nursing facility. Beds in these facilities are generally organized into the units listed below:

Adult General Long-term Care Unit

This includes all generalized chronic disease beds designated for long-term adult inpatients. Any specialized units for particular diseases, physical conditions or amount of care required are listed under "specialty" long-term care.

Pediatric or Adolescent Inpatient Long-term Care Unit

All generalized chronic disease beds designated for children or adolescent inpatients (age 21 or less) are included here. Specialized units which are specifically designed and listed under "specialty" long-term care are listed separately.

Medical/Surgical Unit

Included here are beds designated for acute episodes of chronic disease or other medical conditions necessitating a high level of medical care or surgery. This unit may be relatively short-term, but its use is generally reserved for inpatients of the chronic or rehabilitation hospitals.

Rehabilitation Unit

A unit within a chronic disease hospital with the same characteristics as a rehabilitation unit in an acute

care hospital.

Skilled Nursing Unit

A service which provides continuous skilled nursing care and restorative and therapeutic services to patients. These patients require more intensive nursing care than that provided in intermediate nursing units.

Intermediate Nursing Care Unit

A service which provides routine nursing services with periodic utilization of skilled nursing, restorative and other therapeutic services. Patients in these units do not require the constant skilled nursing care provided in skilled nursing care units.

Specialty Long-term Care

Any separate and distinct bed complements for particular diseases, physical conditions or amount of care required by inpatients. Units such as a self-care unit or tuberculosis unit would fall into the specialty category if a distinct bed complement was assigned to each unit.

PSYCHIATRIC HOSPITAL TERMINOLOGY

Psychiatric Hospital

These facilities have their own governing body, own administration, own staff and their primary function is the diagnosis, treatment and rehabilitation of the psychiatrically ill. The staff of these hospitals will include psychiatrists and other physicians who assume clinical responsibility for all patients with a primary diagnosis of psychiatric disorder. This category includes facilities which treat mild nervous disorders and are licensed by the Massachusetts Department of Public Health. Beds in these hospitals are generally organized into the following units:

Adult Psychiatric Unit

Beds designated for a separate and distinct adult psychiatric unit.

Pediatric Unit

Beds designated as a separate and distinct unit for children and/or adolescents (age 21 or less) with psychiatric disorders.

Medical/Surgical Unit

Beds designated for medical conditions requiring a high level of medical care. These beds may be either short- or long-term, but they are generally reserved for inpatients of the psychiatric hospital.

Alcohol or Drug Detoxification Unit

A separate and distinct unit for patients in need of detoxification from alcohol or drug abuse.

Alcohol and Drug Rehabilitation Unit

A separate and distinct unit for inpatients requiring physical recuperation, treatment and/or intensive psychosocial rehabilitation as a result of alcoholism or drug dependency.

Physical Rehabilitation Unit

Beds within the psychiatric hospital with the same characteristics as a rehabilitation unit in an acute hospital. These beds are generally reserved for inpatients of the hospital.

Skilled or Intermediate Nursing Units

Beds designated to provide skilled or intermediate nursing care but generally reserved for inpatients of the psychiatric hospital. These units have the same characteristics as those defined for chronic/rehabilitation hospitals.

Chronic Care Unit

A specially designated unit for patients with chronic conditions. This unit is generally reserved for inpatients of the psychiatric hospital. The characteristics of this unit are similar to those decribed for acute hospitals.

ACKNOWLEDGEMENTS

The 1987 Hospital Bed and Discharge Data Book is the result of the joint efforts of the data providers and Massachusetts Department of Public Health personnel. The cooperation and assistance of the many individual hospitals who provided the information contained within this report deserve particular mention.

This report was prepared by the following Department of Public Health staff:

Laurie Jannelli

Susan M. Schappert, M.A.

Victoria Vespe Ozonoff, Ph.D.

Maureen Mata

Also worthy of mention are our many data entry operators, under the supervision of Mary McLaughlin. In addition, Duke Rhoden, Lynne Steinman, and Tillie Teixeira provided valuable computer expertise. Clare Mahan supplied helpful statistical advice.

The joint efforts of the entire staff of the Health Resources Statistics Unit were necessary to produce this report. Special acknowledgement is made to all of them.

The 1987 Hospital Bed and Discharge Data Book has been compiled under the general supervision and direction of:

Daniel J. Friedman, Ph.D., Assistant Commissioner
Bureau of Health Statistics, Research and Evaluation

1987 HOSPITAL BED AND DISCHARGE DATA BOOK

INTRODUCTION

This report presents Fiscal Year 1987 (FY87) bed utilization and discharge data for all hospitals in Massachusetts[1]. The data in this report are based on hospital responses to the 1987 Annual Hospital Statistical Report (AHSR).

The 1987 Hospital Bed and Discharge Data Book includes the following bed utilization statistics for each reporting hospital: number of beds, census days, average daily census and occupancy rate. Discharge statistics include number of discharged patients, discharged patient days, and average length of stay. Bed utilization and discharge statistics are also displayed for individual services within each facility.

The data in this report have been grouped by hospital type: acute, chronic, and psychiatric. Each hospital type is arranged alphabetically by geographic region (Health Service Area; see Appendix 2 for Health Service Area Map). Summary statistics are presented below, along with some comparisons with aggregated data for 1985 and 1986. In addition, a special section has been included (see Appendix 3) which examines utilization statistics for state-owned hospitals in greater detail and compares them with utilization statistics for non-state-owned hospitals.

MASSACHUSETTS HOSPITALS

There were 167 Massachusetts hospitals at the end of the 1987 fiscal year, two less than in 1986. During the 1987 fiscal year, Mary A. Alley Hospital (HSA 6) closed, and Lynn Hospital (also located in HSA 6) merged with Atlanticare Medical Center (formerly Union Hospital).

Of this total, 115 (69%) were acute hospitals, 27 (16%) were chronic hospitals, and 25 (15%) were psychiatric hospitals[2] (Figure 1).

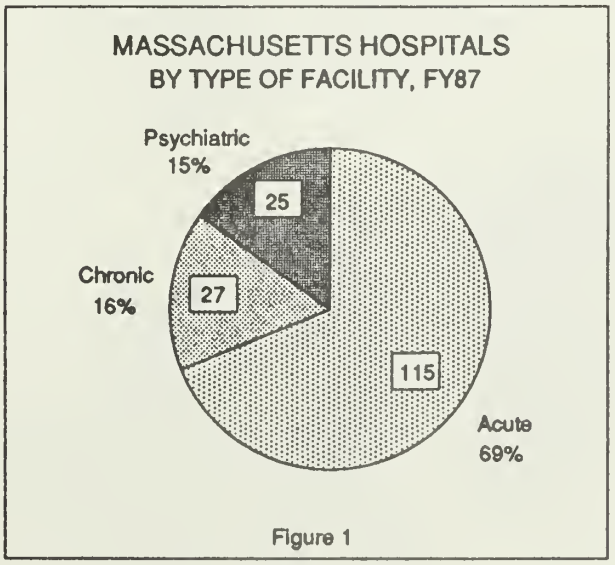

Figure 1

MASSACHUSETTS HOSPITAL BEDS

At the end of FY87, there were 37,123 hospital beds in Massachusetts. Nearly three-quarters, 70.8%, of these (26,275) were located in acute hospitals, while 16% (5,944) were in chronic hospitals and 13.2% (4,904) were in psychiatric hospitals (Figure 2).

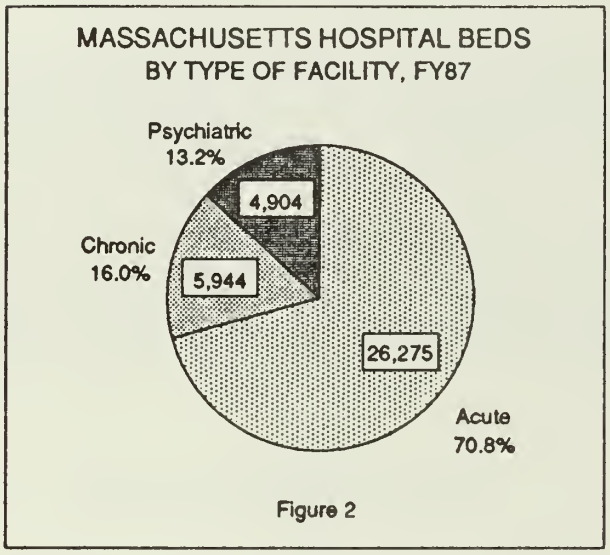

Figure 2

Figure 3 shows a comparison of hospital beds by type of facility for 1985 through 1987. Only the number of psychiatric beds has increased relative to 1985 levels[3].

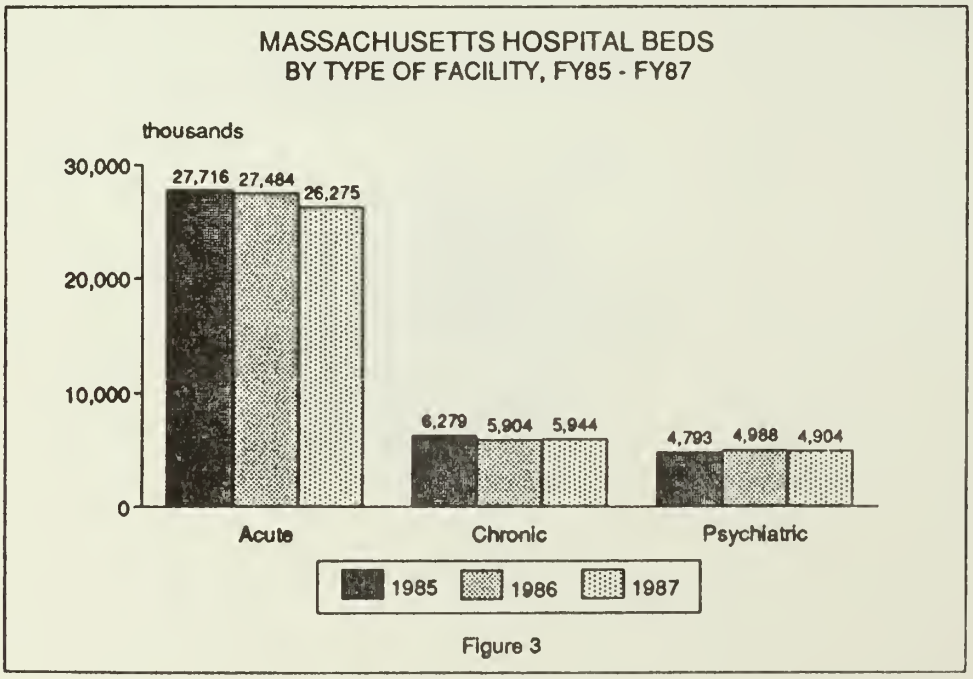

Figure 3

OCCUPANCY RATES

Overall, the occupancy rate for FY87 was found to be highest for psychiatric hospitals, at 92.7%[4]. Chronic facilities were second with a rate of 88.9%, while acute hospitals reported the lowest occupancy rate of the three facility types at 68.0% (Figure 4).

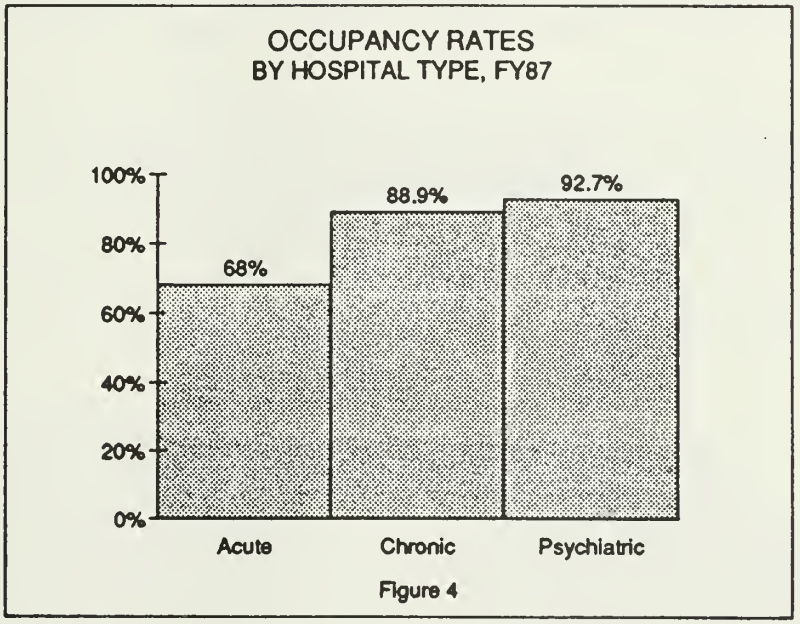

Figure 4

When occupancy rates are compared for 1985, 1986, and 1987, it appears that the rate for acute and chronic hospitals has been stable for the two most recent years, following a decrease from 1985 levels. On the other hand, the occupancy rate for psychiatric facilities has been rising since 1985 (Figure 5).

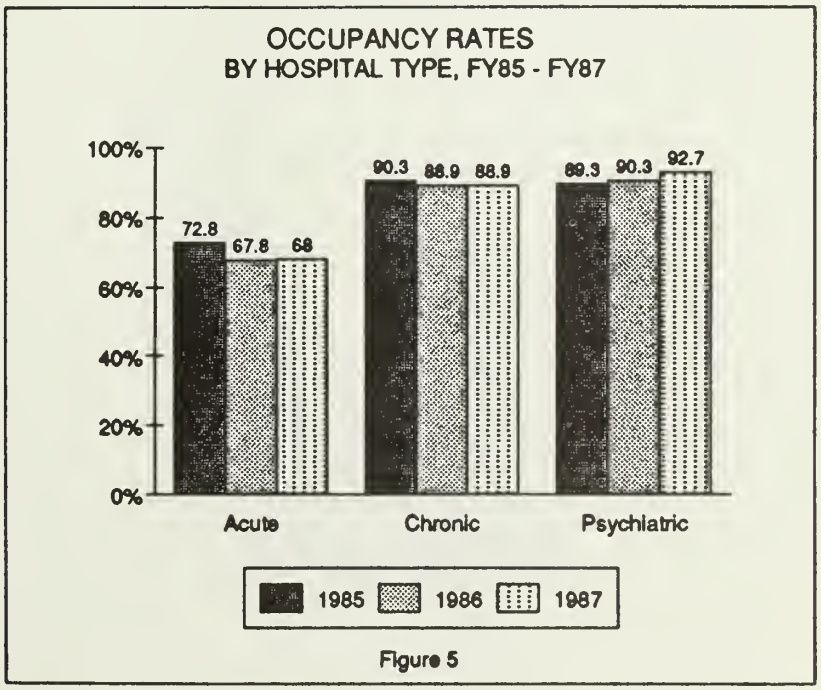

Figure 5

OCCUPANCY RATES FOR SELECTED SERVICES

Occupancy rates for selected services are presented below for each of the three types of hospitals. The most commonly offered service within acute hospitals was Medical/Surgical, with 108 (93.9%) of 115 facilities reporting it; occupancy rate for this service was 68.4%[5]. Coronary care units reported the highest occupancy rate, at 71.7%. Forty-eight acute hospitals (41.7%) offered this service to patients (Figure 6).

Within chronic hospitals, chronic care was the most commonly offered service, with 11 (40.7%) of 27 facilities reporting it. Occupancy rate for chronic care units was high, at 92.7%. Second was physical rehabilitation, with 9 facilities (33.3%) reporting this service. Occupancy rate for physical rehabilitation units was 90.5% (Figure 7).

Psychiatric hospitals mainly offered two types of services to their patients--psychiatric and alcohol/drug rehabilitation. Twenty-three (92%) of 25 psychiatric hospitals reported psychiatric services; occupancy rate for psychiatric units was 95.2%. For alcohol/drug rehabilitation units in psychiatric hospitals, occupancy rate was 71.8% (Figure 8). Five psychiatric hospitals (20%) reported this service.

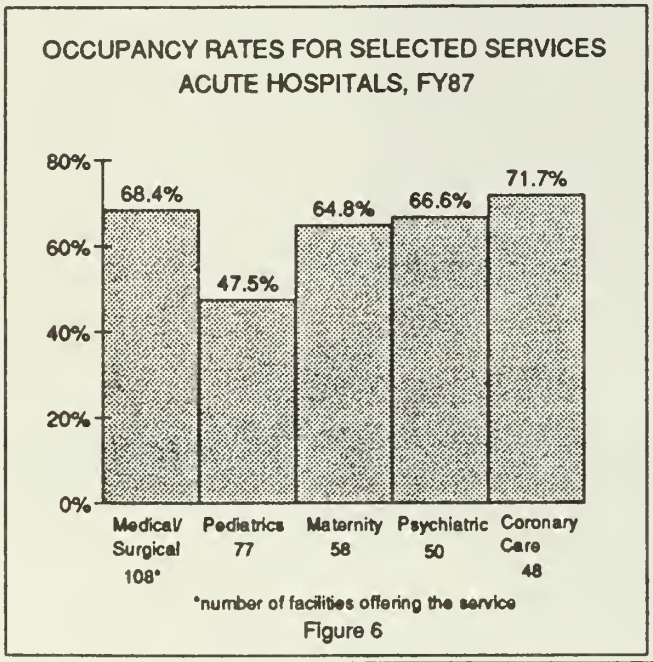

Figure 6

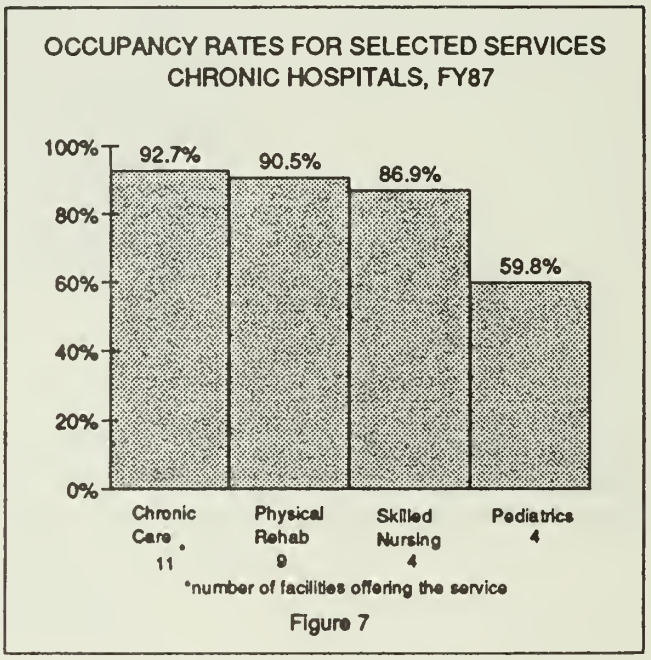

Figure 7

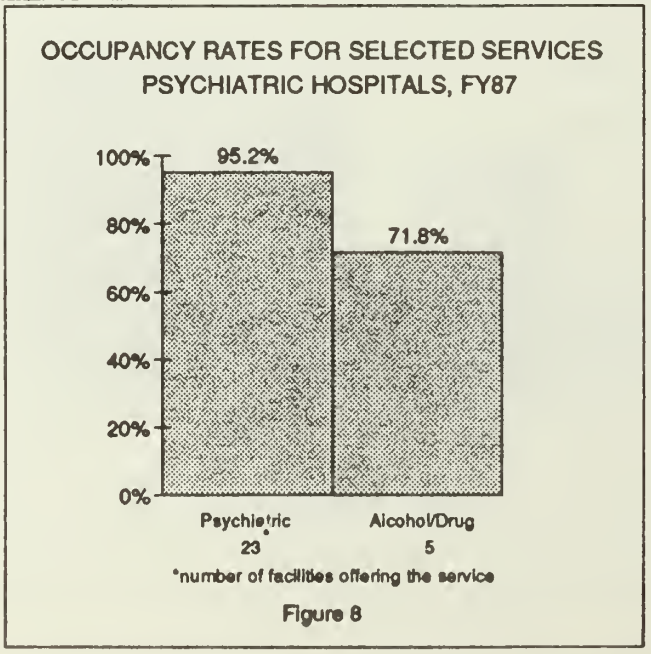

Figure 8

AVERAGE LENGTH OF STAY

In general, acute hospitals had the shortest average length of stay, at 8.1 days, while chronic hospitals had the longest, at 134.7. Average length of stay in psychiatric hospitals was 78.6 days (Figure 9).

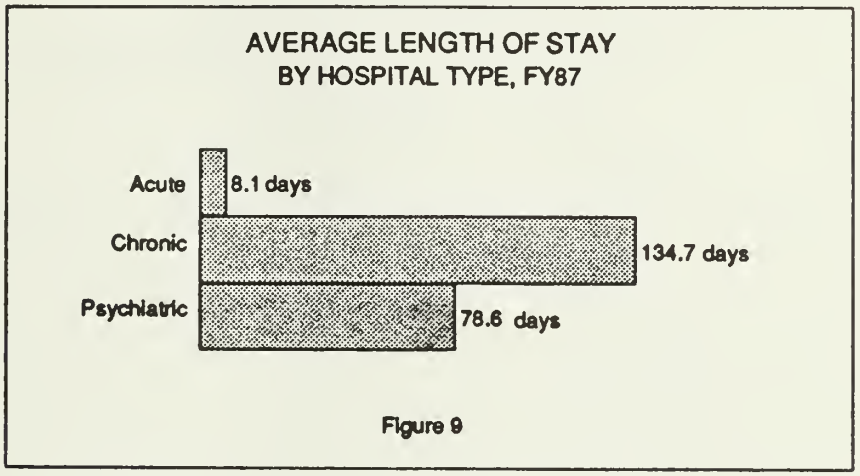

Figure 9

However, average length of stay within each hospital type varied substantially according to patient's age category. Generally, average lengths of stay increased for each successive age group, with those in the 75+ years group having the longest average lengths of stay, regardless of facility type (Figure 10).

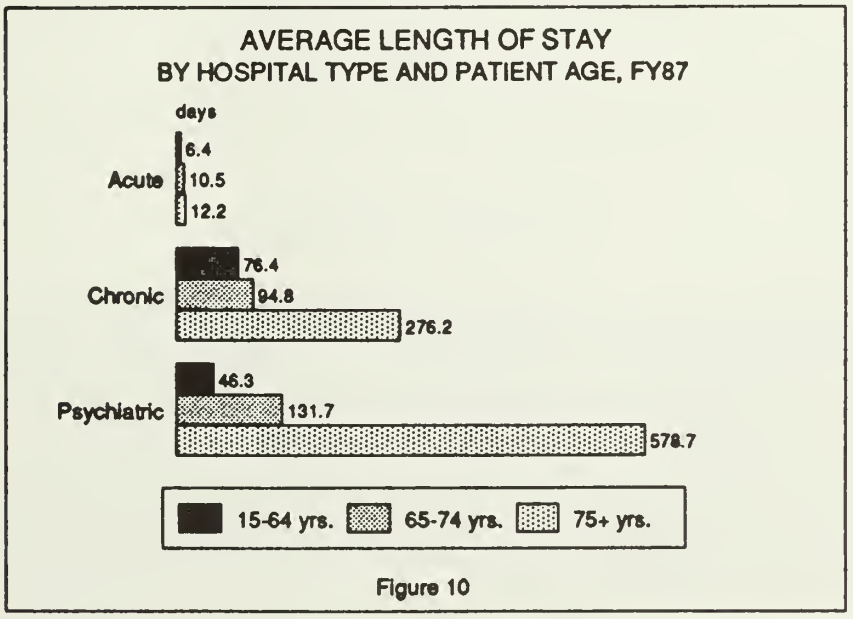

Figure 10

AVERAGE LENGTH OF STAY (cont.)

Average lengths of stay for 1985, 1986, and 1987 are compared in Table 1. Overall rates for average length of stay decreased by 4.7% in acute facilities from 1985 to 1987. In chronic facilities, average length of stay rose by 4.2% from 1985 to 1986 but decreased by 4.3% from 1986 to 1987. Overall rates for average length of stay in psychiatric facilities increased by 10.7% from 1985 to 1987.

AVERAGE LENGTH OF STAY
BY HOSPITAL TYPE AND PATIENT AGE, FY85 - FY87

	1985	1986	1987
Acute All Ages	8.5	8.1	8.1
Acute 15-64 yrs.	6.3	6.1	6.4
Acute 65-74 yrs.	11.1	10.2	10.5
Acute 75+ yrs.	12.5	11.0	12.2
Chronic All Ages	135.1	140.8	134.7
Chronic 15-64 yrs.	96.5	86.2	76.4
Chronic 65-74 yrs.	105.0	93.2	94.8
Chronic 75+ yrs.	249.1	211.5	276.2
Psychiatric All Ages	71.0	74.0	78.6
Psychiatric 15-64 yrs.	46.4	55.9	46.3
Psychiatric 65-74 yrs.	209.8	186.3	131.7
Psychiatric 75+ yrs.	150.3	632.2	578.7

Table 1

ADDITIONAL INFORMATION

This concludes the introductory section of the 1987 Hospital Bed and Discharge Data Book. The remainder of this report summarizes the bed and discharge sections of the 1987 Annual Hospital Statistical Report through a series of facility-specific utilization tables. The purpose of this publication is to provide basic information on hospital bed and discharge statistics. These tables are intended to serve as reference documents, and little or no interpretation of results is provided.

The summary statistics presented in this data book are based on all Massachusetts hospitals, including federal facilities and specialty hospitals such as the Shriner Burns Institute. When comparing data presented in this report with other sources, it should be remembered that the number of hospitals may vary according to the purpose of the analysis and the definitions used in the data collection process.

ADDITIONAL INFORMATION (cont.)

The data source from which these tables have been derived (AHSR) is available for further analysis. Data on other facilities types (nursing and rest homes, home health agencies, ambulatory care facilities, and residential care facilities) are also available. Requests for additional information should be directed to:

VictoriaVespe Ozonoff, Ph.D.
Health Resources Statistics
Bureau of Health Statistics, Research and Evaluation
Massachusetts Department of Public Health
150 Tremont St.
Boston, MA 02111

Additional copies of this report may be obtained by calling (617) 727-DATA or (617) 727-8960.

FOOTNOTES

[1]The reporting period (fiscal year) runs from October 1 through September 30 for most hospitals. The most notable exceptions to this are the state facilities, whose fiscal years runs from July 1 to June 30.

[2]The majority of hospitals surveyed by the Health Resources Statistics Unit are licensed by the Commonwealth and are classified as acute care based on licensing requirements. For those hospitals not licensed by the Commonwealth, classification is based upon self-classification by the facility on the annual survey. For this reason, the number of acute care hospitals listed in this report differs from the number reporting to the Massachusetts Rate Setting Commission.

[3]Between the end of FY86 and FY87, 190 hospital beds were lost due to the closing of one hospital and the merger of two others. Most of the remaining apparent loss of beds is actually due to changes in hospital reporting practices. Specific instances of this have been footnoted in the Bed Tables which follow.

[4]Six state psychiatric facilities reported rates in excess of 100.0% for the 1987 fiscal year. See Appendix 3 for a comparison of State-owned and all other facilities.

[5]Overall occupancy rates for each service were calculated as follows: for those facilities reporting both mean bed and census day figures for the service, the total number of census days for all such facilities was divided by the total number of corresponding mean beds; the result was then divided by 365.

APPENDICES

1987 HOSPITAL BED AND DISCHARGE DATA BOOK

APPENDIX 1
GLOSSARY

UTILIZATION TERMS

Hospital

Any institution, however named, whether conducted for charity or for profit, which is announced, advertised, established or maintained for the purpose of caring for persons admitted thereto for diagnosis, medical, surgical or restorative treatment which is rendered within said institution. (Massachusetts General Laws, Chapter III, Section 52, 1972)

Admission

For acute, chronic and rehabilitation hospitals an admission is any documented entry into a 24-hour facility for the purpose of inpatient care and treatment. For psychiatric hospitals, an admission includes readmissions, returnees from extramural status and transfer or discharge commitments. It excludes returns from absences of seven days or less.

Patient Days

There are two types of patient days used in the preparation of this report: those calculated on a census basis (census days) and those calculated on a discharge basis (discharged patient days).

Census Day

This counts that period of service rendered to inpatients between the census-taking hours of two successive days. The day of discharge is counted only when the patient was admitted on the same day.

Total Census Days

For a hospital, these represent the total patient census provided by each unit in the facility for the entire reporting period - generally 365 days. The figure for total census days is based on the year's summation of individual units.

Average Daily Census (ADC)

This represents the number of patients in the facility on an "average" day. It is calculated as follows:

$$ADC = \frac{\text{Total Census Days}}{\text{\# Days in Reporting Period}}$$

Discharged Patient Days

This refers to the number of days of care, by service, rendered to inpatients who were discharged during the reporting period. This category also includes the days of care rendered to patients who were discharged due to death.

Total Discharged Patient Days

This is the summation of discharge days of the individual units.

Average Length of Stay (ALOS)

This is the average duration of inpatient stay in a facility. It is calculated as follows:

$$ALOS = \frac{\text{Total Discharged Patient Days}}{\text{Total Patients Discharged}}$$

(The two types of patient days differ in terms of time used in their recording. For example, Hospital A has a reporting period of October 1, 1986 through September 30, 1987. John Smith was admitted as an inpatient on September 1, 1986 and discharged on October 15, 1986. On a discharge basis, Mr. Smith would represent 44 patient days of care, but, on a census basis, he would account for only 14 days (October 1 - 14) of care.

For short-term services, the results of computations involving patient days (such as average length of stay) will vary little regardless of the type of patient day used. For long-term facilities, however, census days must be used to calculate the average daily census and occupancy rates. Discharged patient days should be used to calculate the average length of stay.)

Beds

Licensed Bed Quota
This is the total number of hospital beds the facility is authorized to operate by the licensing authority.

Operating Bed Capacity
The number of beds staffed and ready to receive inpatients.

Beginning and End Beds
The number of operating beds in the facility on the first and last day of the reporting period.

Mean Beds
These are determined by dividing the sum of the daily operating bed capacities by the number of days in the reporting period.

Occupancy Rate
The percent of beds occupied, on the average, during the reporting period. It is calculated as follows:

$$\text{Occupancy Rate} = \frac{\text{Total Census Days} \times 100}{(365)\ \text{Mean Operating Beds}}$$

(In short-term services, discharged patient days may be used to calculate occupancy rates if census days are not available.)

Missing Values
Although most facilities are able to provide complete information on their annual report, there are occasions when missing values are present. Missing values will appear as "UNK" on the tables. Occupancy rates have not been calculated for facilities unable to provide mean beds and/or census days. An average length of stay has not been calculated for any facility unable to provide total discharges and/or total discharged patient days. HSA and state totals for occupancy rate and length of stay have been adjusted to exclude those facilities providing partial or incomplete data.

ACUTE HOSPITAL TERMINOLOGY

Acute Hospital
A facility which provides general and specialized medical and surgical care to inpatients and in which 50% or more of the patients spend less than 30 days. Maternity and pediatric hospitals are included in this category. Beds in acute hospitals are generally organized into the units listed below:

Medical/Surgical Unit
Beds designed for short-term adult medical/surgical patients. All medical/surgical subspecialties are included here unless specifically listed elsewhere or specifically designated as rehabilitation beds.

Intensive Care Unit (ICU)
A specially designated hospital unit in which special equipment and skilled personnel are concentrated for the care of seriously ill patients requiring immediate and continuous attention. In addition to general purpose medical/surgical ICUs, many hospitals have specialty units which include the following: separate medical and surgical ICUs, pediatric and

burn care and transplant units.

Pediatric Unit
A unit with beds for short-term pediatric care (less than age 15). This includes cribs or bassinets unrelated to the maternity service. Facilities which provide pediatric care exclusively report all beds and utilization statistics under the "pediatrics" heading except for distinct bed complements designated for rehabilitation, psychiatric or long-term care for children or adolescents.

Maternity Unit
All beds located within the maternity unit regardless of whether used for maternity or clean gynecology. Bassinets and newborn statistics are not included in the maternity data.

Psychiatric Unit
Beds designated for a separate and distinct inpatient psychiatric unit.

Rehabilitation Unit
Although rehabilitation services are an integral part of all patient care, only beds designated to a distinct unit which is staffed and equipped for the primary purpose of providing inpatient rehabilitation, i.e., coordinated multidisciplinary physical and restorative services, are included in these statistics.

Long-term Care Unit
A long-term care unit within an acute hospital includes the following: a unit set aside as a skilled nursing facility (SNF or Level II) and certified as such for participation in Medicaid or Medicare; a unit set aside as an intermediate care facility (ICF or Level III) and certified for participation under Medicaid; a unit set aside as a residential care facility (RH, RCF or Level IV) of a chronic care unit where the average length of stay is 30 days or more. Excluded are rehabilitation or psychiatric units specifically defined elsewhere.

CHRONIC AND REHABILITATION HOSPITAL TERMINOLOGY

Chronic and rehabilitation hospitals
Included are those facilities providing skilled nursing and rehabilitation services to post-acute or chronically ill patients. The majority of these patients stay 30 days or more and require a greater concentration of equipment, services and skilled personnel than can be provided in a Level I/II skilled nursing facility. Beds in these facilities are generally organized into the units listed below:

Adult General Long-term Care Unit
This includes all generalized chronic disease beds designated for long-term adult inpatients. Any specialized units for particular diseases, physical conditions or amount of care required are listed under "specialty" long-term care.

Pediatric or Adolescent Inpatient Long-term Care Unit
All generalized chronic disease beds designated for children or adolescent inpatients (less than age 15) are included here. Specialized units which are specifically designed and listed under "specialty" long-term care are listed separately.

Medical/Surgical Unit
Included here are beds designated for acute episodes of chronic disease or other medical conditions necessitating a high level of medical care or surgery. This unit may be relatively short-term, but its use is generally reserved for inpatients of the chronic or rehabilitation hospitals.

Rehabilitation Unit
A unit within a chronic disease hospital with the same characteristics as a rehabilitation unit in an acute care hospital.

Skilled Nursing Unit

A service which provides continuous skilled nursing care and restorative and therapeutic services to patients. These patients require more intensive nursing care than that provided in intermediate nursing units.

Intermediate Nursing Care Unit

A service which provides routine nursing services with periodic utilization of skilled nursing, restorative and other therapeutic services. Patients in these units do not require the constant skilled nursing care provided in skilled nursing care units.

Specialty Long-term Care

Any separate and distinct bed complements for particular diseases, physical conditions or amount of care required by inpatients. Units such as a self-care unit or tuberculosis unit would fall into the specialty category if a distinct bed complement was assigned to each unit.

PSYCHIATRIC HOSPITAL TERMINOLOGY

Psychiatric Hospital

These facilities have their own governing body, own administration, own staff and their primary function is the diagnosis, treatment and rehabilitation of the psychiatrically ill. The staff of these hospitals will include psychiatrists and other physicians who assume clinical responsibility for all patients with a primary diagnosis of psychiatric disorder. This category includes facilities which treat mild nervous disorders and are licensed by the Massachusetts Department of Public Health. Beds in these hospitals are generally organized into the following units:

Adult Psychiatric Unit

Beds designated for a separate and distinct adult psychiatric unit.

Pediatric Unit

Beds designated as a separate and distinct unit for children and/or adolescents (less than age 15) with psychiatric disorders.

Medical/Surgical Unit

Beds designated for medical conditions requiring a high level of medical care. These beds may be either short- or long-term, but they are generally reserved for inpatients of the psychiatric hospital.

Alcohol or Drug Detoxification Unit

A separate and distinct unit for patients in need of detoxification from alcohol or drug abuse.

Alcohol and Drug Rehabilitation Unit

A separate and distinct unit for inpatients requiring physical recuperation, treatment and/or intensive psychosocial rehabilitation as a result of alcoholism or drug dependency.

Physical Rehabilitation Unit

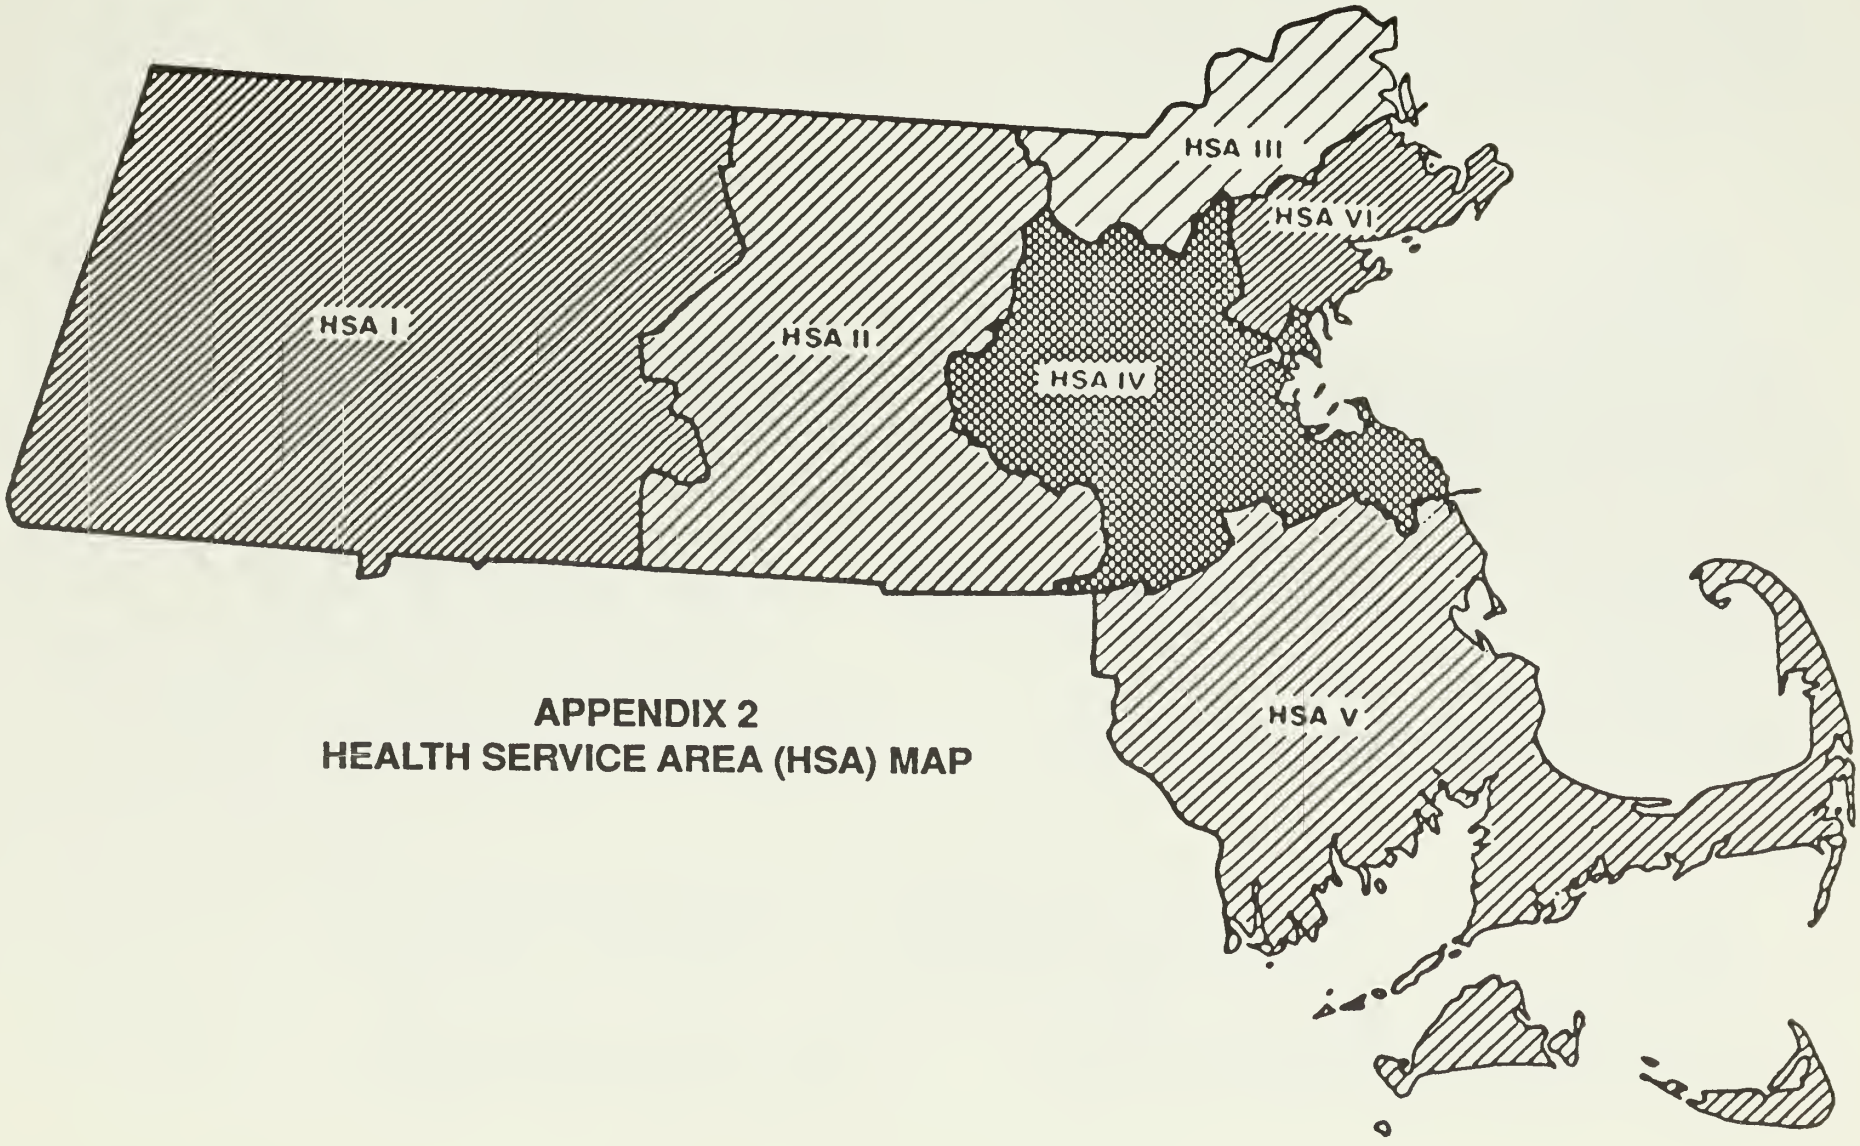

Beds within the psychiatric hospital with the same characteristics as a rehabilitation unit in an acute hospital. These beds are generally reserved for inpatients of the hospital.

Skilled or Intermediate Nursing Units

Beds designated to provide skilled or intermediate nursing care but generally reserved for inpatients of the psychiatric hospital. These units have the same characteristics as those defined for chronic/rehabilitation hospitals.

Chronic Care Unit

A specially designated unit for patients with chronic conditions. This unit is generally reserved for inpatients of the psychiatric hospital. The characteristics of this unit are similar to those decribed for acute hospitals.

APPENDIX 3
STATE-OWNED HOSPITALS IN MASSACHUSETTS

Of the 167 hospitals in Massachusetts at the end of the 1987 fiscal year, 22, or 3%, were owned and operated by the State. This group of state-owned hospitals presents a profile that differs in some significant ways from that of the other hospitals included in this report. The most notable areas of difference are in the type of services offered and the average length of stay of residents. A closer examination of state-owned hospitals, along with comparisons to non-state-owned hospitals, is presented below.

FACILITY TYPE

State-owned hospitals mainly serve those in need of psychiatric services. Of the 22 state-owned hospitals in Massachusetts during fiscal year 1987, 12 (54%) were psychiatric facilities and 7 (32%) were chronic hospitals. Only 3 (14%) were classified as acute hospitals. Conversely, of the 145 other hospitals in Massachusetts, 115 were acute hospitals (77%), while only 27 (14%) were classified as chronic and 25 (9%) were classified as psychiatric facilities (Figure 3.1).

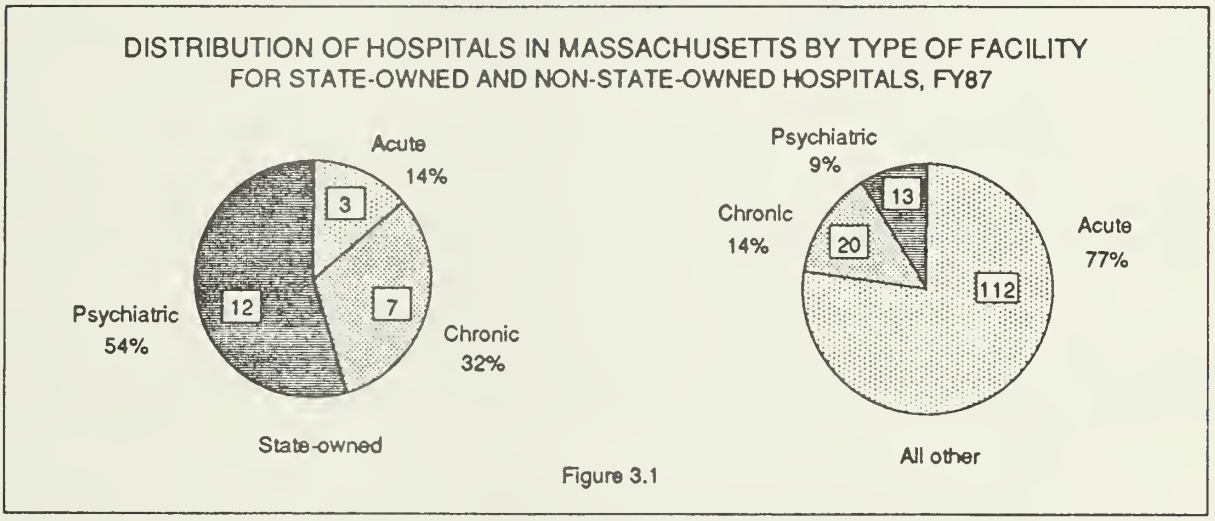

Figure 3.1

State-owned facilities accounted for only 2.6% of all acute hospitals in the state, but they comprised 25.9% of all chronic hospitals and 48% of all psychiatric hospitals in Massachusetts (Figure 3.2).

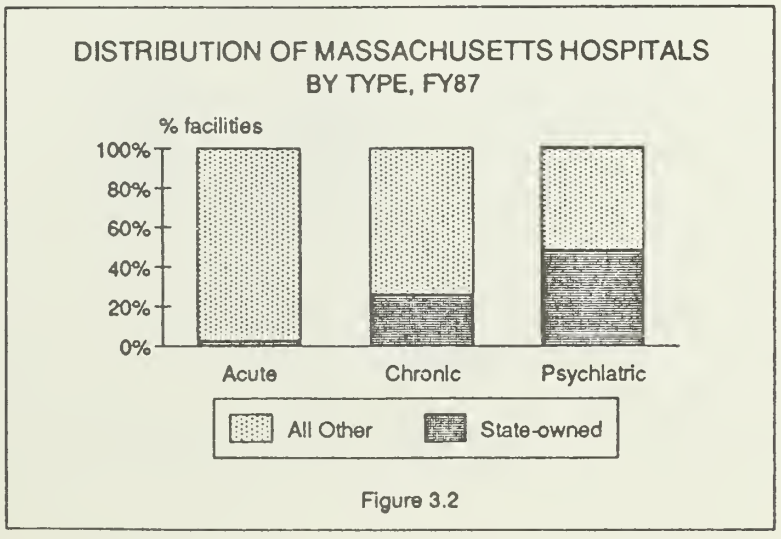

Figure 3.2

BEDS

Although they comprised only 3% of all Massachusetts hospitals, state-owned hospitals accounted for 14.2% of all hospital beds, with a total of 5,279. Of this number, 2,452 (46.5%) were located in psychiatric facilities. Chronic hospitals accounted for 2,039 beds (38.6%), while 788 beds (14.9%) were located in acute care facilities (Figure 3.3).

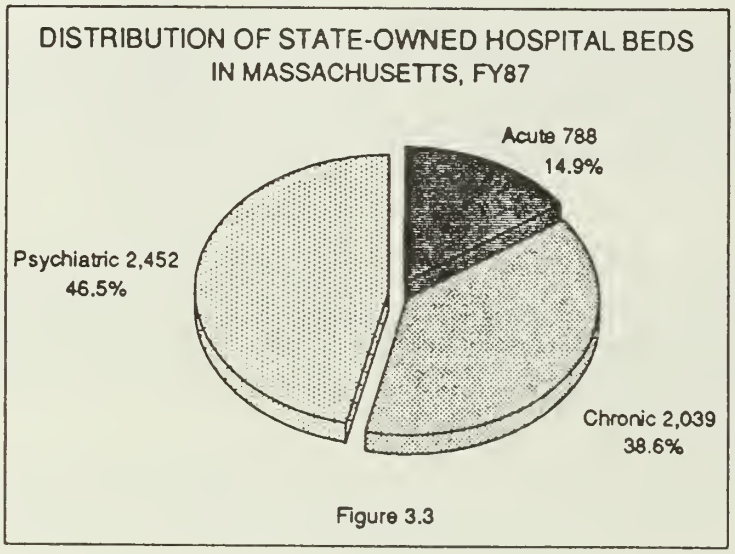

Figure 3.3

State-owned hospitals accounted for half of all psychiatric hospital beds and 34.3% of all chronic hospital beds, but only 3% of all acute care hospital beds in Massachusetts (Figure 3.4).

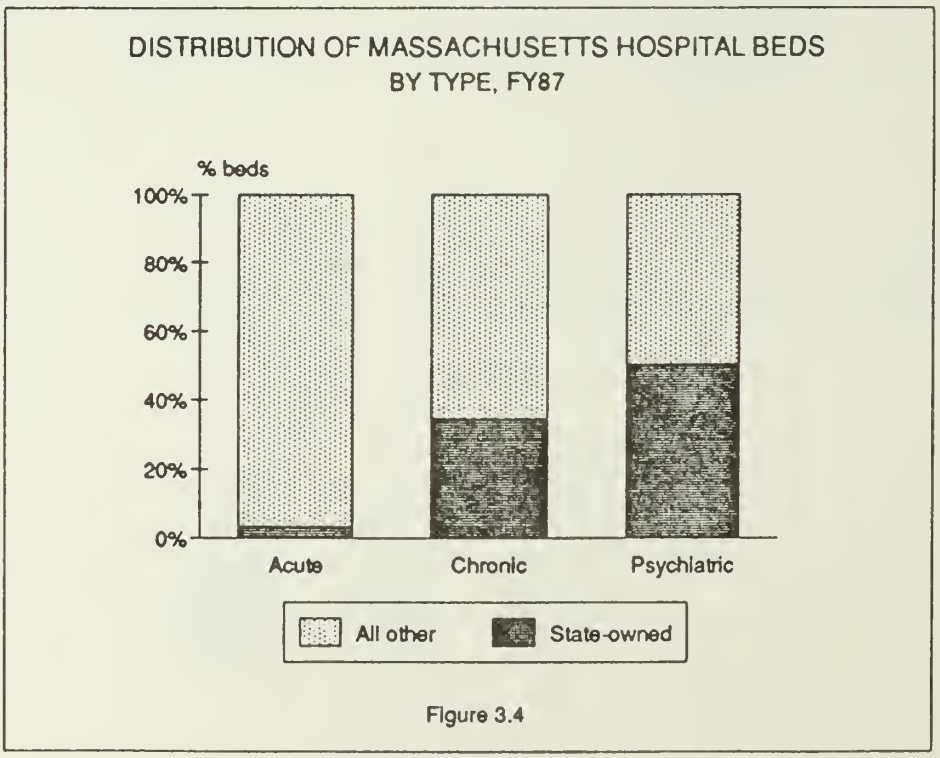

Figure 3.4

OCCUPANCY RATE

Occupancy rates for state-owned acute, chronic, and psychiatric facilities were 79.6%, 86.7%, and 100.0%, respectively (Figure 3.5). These rates are higher than those for the aggregate of all other hospitals in the case of acute and psychiatric facilities. The occupancy rate for chronic hospitals, however, was slightly higher for non-state-owned facilities.

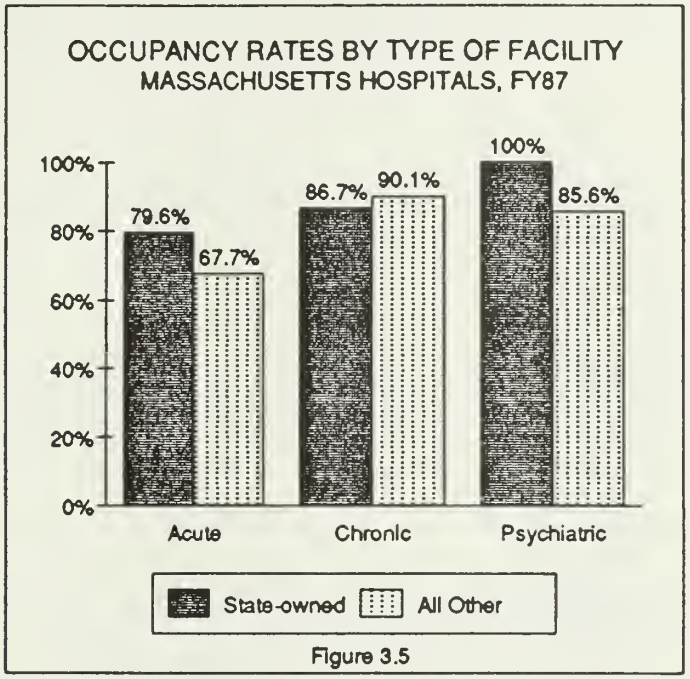

Figure 3.5

AVERAGE LENGTH OF STAY

Average lengths of stay for state-owned acute, chronic, and psychiatric facilities were 12.2 days, 360.9 days, and 128.4 days, respectively (Figure 3.6). These lengths of stay are substantially higher than those for the aggregate of all other hospitals.

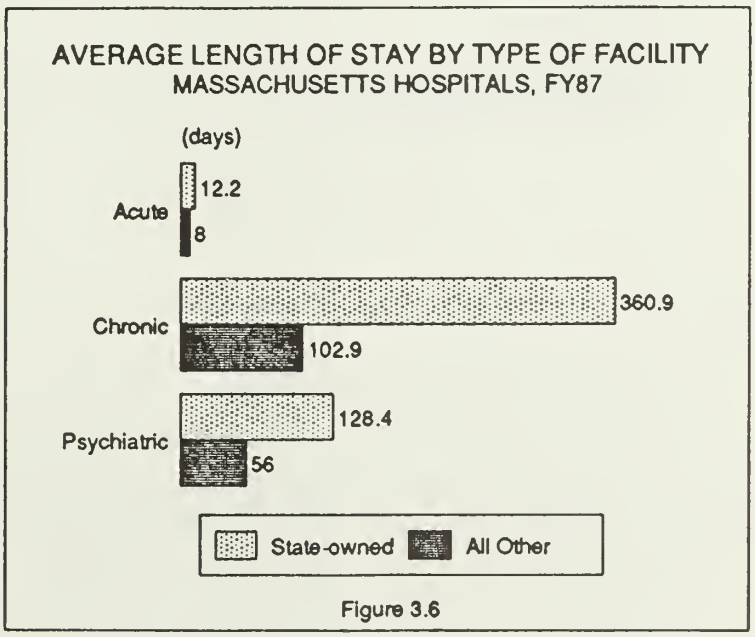

Figure 3.6

AVERAGE LENGTH OF STAY (cont.)

The difference between state-owned and all other hospitals in terms of average length of stay becomes even more apparent when average lengths of stay are broken down by patient age category (Figure 3.7).

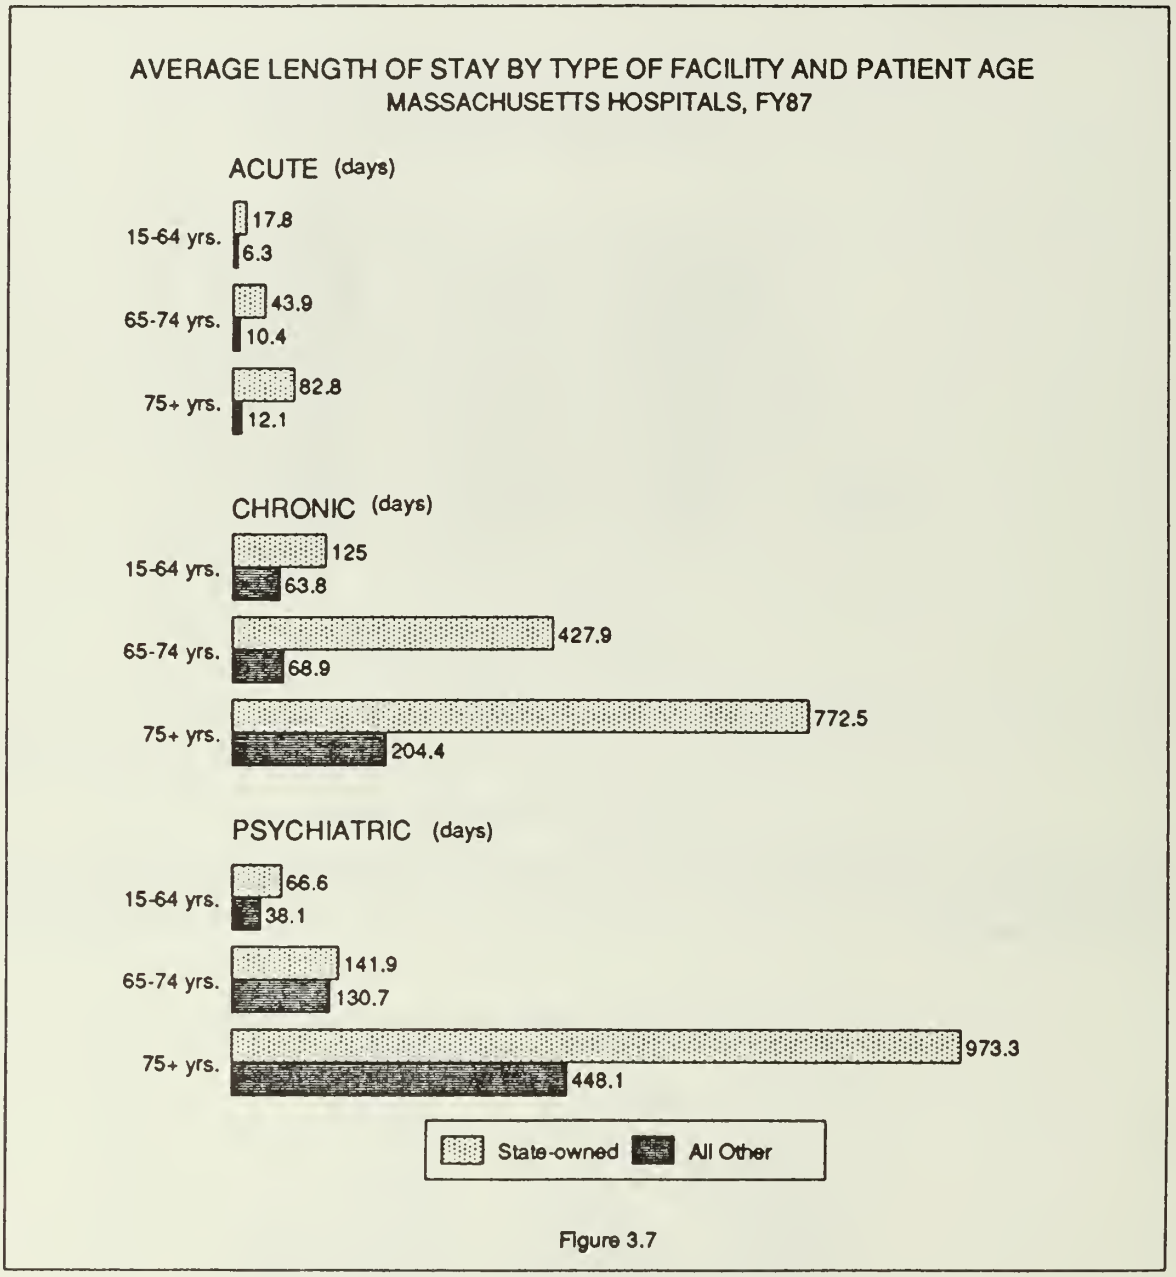

Figure 3.7

FACILITY-SPECIFIC BED AND DISCHARGE UTILIZATION STATISTICS

The tables on the following pages display facility-specific bed utilization and discharge statistics for fiscal year 1987 for state-owned hospitals arranged by type--acute, chronic, and psychiatric.

ACKNOWLEDGEMENTS

The 1988 Hospital Bed and Discharge Data Book is the result of the joint efforts of the data providers and Massachusetts Department of Public Health personnel. The cooperation and assistance of the many individual hospitals who provided the information contained within this report deserve particular mention.

This report was prepared by the following Department of Public Health staff:

Laurie Jannelli

Susan M. Schappert, M.A.

Victoria Vespe Ozonoff, Ph.D.

Also worthy of mention are our many data entry operators, under the supervision of Mary McLaughlin. In addition, Duke Rhoden and Tillie Teixeira provided valuable computer expertise.

The joint efforts of the entire staff of the Health Resources Statistics Unit were necessary to produce this report. Special acknowledgement is made to all of them.

The 1988 Hospital Bed and Discharge Data Book has been compiled under the general supervision and direction of:

Daniel J. Friedman, Ph.D., Assistant Commissioner
Bureau of Health Statistics, Research and Evaluation

1988 HOSPITAL BED AND DISCHARGE DATA BOOK

INTRODUCTION

This report presents Fiscal Year 1988 (FY88) bed utilization and discharge data for all hospitals in Massachusetts. The data in this report are based on hospital responses to the 1988 Annual Hospital Statistical Report (AHSR).

The 1988 Hospital Bed and Discharge Data Book includes the following bed utilization statistics for each reporting hospital: number of beds, census days, average daily census, and occupancy rate. Discharge statistics include number of discharged patients, discharged patient days, and average length of stay.

The data in this report have been grouped by hospital type: acute, chronic, and psychiatric[1]. Each of the three facility types has been arranged alphabetically by geographic region[2]. Statistics are presented for individual services within each facility as well as in aggregate form.

SUMMARY OF KEY STATISTICS FOR FY88

• Of the 164 hospitals surveyed, 113 (**69%**) were acute care facilities, 26 (**16%**) were chronic facilities, and 25 (**15%**) were psychiatric facilities. These percentages are identical to those for FY87.

• Of the hospitals surveyed, 94 (**57%**) were nonprofit corporations, 45 (**27%**) were government-owned (federal, state, county, and city); 13 (**8%**) were for-profit institutions; and 12 (**7%**) were church-based.

• Nearly three-quarters of the acute hospitals (**71%**) were nonprofit corporations, while more than half of the chronic and psychiatric facilities were government-owned (**62%** and **56%** respectively).

• A total of **36,237** beds were reported for FY88, a slight decrease (**2%**) from the total of 37,123 reported for FY87. Two hospitals closed during FY88, and one was acquired by another facility[3].

• Of the 36,237 beds reported, **71%** (25,626) were located in acute care hospitals, **16%** (5,723) were in chronic hospitals, and **13%** (4,908) were found in psychiatric hospitals. These percentages are identical to those for FY87.

---

[1]See Appendix 1, Glossary, for definitions of each hospital type.

[2]See Appendix 2, Cities and Towns by Region.

[3]See Technical Notes for details.

SUMMARY OF KEY STATISTICS FOR FY88 (continued)

• Psychiatric facilities reported the highest overall occupancy rate, at **89.6%**, a slight decrease from the rate of 92.7% reported by these facilities for FY87. Overall occupancy rates for chronic hospitals (**87.9%**) and acute care facilities (**69.8%**) were similar to those reported in FY87 (88.9% and 68.0% respectively).

• Average length of stay was **8.4** days in acute care facilities, **97.0** days in chronic, and **54.9** days in psychiatric facilities. Average stays for acute facilities were similar to those reported in FY87 (8.1), but lower for chronic and psychiatric facilities (134.7 and 78.6 respectively in FY87). The difference in average length of stay between the two years in chronic facilities is mainly attributable to two facilities, which reported much shorter stays in FY88 than in FY87.

• Average length of stay varied by age within each type of hospital. Average length of stay for younger patients (15-64 years) in acute hospitals was **6.5** days, compared to **11.6** for older patients (65 years and over). In chronic facilities, younger residents showed an average length of stay of **84.4** days compared to **104.1** for older patients. Finally, younger patients of psychiatric facilities had an average stay of **46.7** days while older patients stayed, on average, **184.8** days.

• Average length of stay in acute hospitals decreased slightly for the under 65 population (**6.5** days in FY88 vs. 7.1 days in FY87), although for elders (those aged 65 years or older) length of stay increased somewhat (**11.6** days in FY88 vs. 10.8 in FY87).[4]

TECHNICAL NOTES

Facility Classification: The majority of hospitals surveyed by the Health Resources Statistics Unit are licensed by the Commonwealth and are classified as acute care facilities based on licensing requirements. For those hospitals not licensed by the Commonwealth, classification as an acute, chronic, or psychiatric hospital is based upon self-classification by the facility on the annual survey (AHSR). For this reason, the number of acute care hospitals based on the annual survey may differ from the number reporting to the Massachusetts Rate Setting Commission. For definitions of acute, chronic, and psychiatric hospitals, please refer to Appendix 1, Glossary.

Facility Changes for FY88: There were 164 Massachusetts hospitals at the end of the 1988 fiscal year, or three less than at the end of the 1987 fiscal year. During FY88, Brookline Hospital (acute, Greater Boston Region) and Otis Hospital (chronic, Greater Boston Region) closed. Parkwood Hospital was acquired by St. Luke's Hospital-New Bedford (acute, Southeastern Region).

---

[4]See Technical Notes for a discussion of ALOS in chronic and psychiatric facilities.

TECHNICAL NOTES (continued)

Reporting Period: The 1988 Annual Hospital Statistical Report collected bed utilization and discharge data for the fiscal year, which ran from October 1, 1987 through September 30, 1988 for most hospitals. The most notable exceptions to this are the state hospitals, whose fiscal year runs from July 1 to June 30.

Bed Utilization Data: All beds reported in this publication are operating beds, defined as beds set up, staffed, and available for use. For a listing of terms and formulas used in the compilation of bed utilization data, see Appendix 1, Glossary.

Discharge Statistics: Discharge statistics are provided by the hospital, or by the Utilization Information Service (UIS) through the Massachusetts Hospital Association (MHA). Refer to Appendix 1, Glossary, for an explanation of terms and formulas used in calculating discharge statistics.

Average Length of Stay (ALOS): It should be noted that chronic and psychiatric hospitals often show greater year-to-year differences in ALOS than do acute hospitals. This is due to the periodic discharge of patients with very long stays, in many cases years. Comparisons between years for these hospitals should therefore be made with caution. For instance, a comparison of FY87 and FY88 ALOS for chronic hospitals finds average stays of 134.7 days and 97.0 days respectively. This difference is mainly attributable to two hospitals which reported average lengths of stay of 1,160.9 and 2,077.2 days in FY87, but only 152.0 and 356.2 days in FY88. This example shows the extreme variability of lengths of stay in chronic and psychiatric facilities.

Response Rate: All 164 hospitals surveyed for the 1988 fiscal year responded to the Annual Hospital Statistical Report, for a response rate of 100.0%.

Missing Values: All surveys are manually coded for accuracy, and clarification by phone or letter is sought where responses are missing, incomplete, or inconsistent.

In some cases, hospitals are unable to provide complete information on the annual report. Either the information is unavailable, or it can only be provided in a format other than what has been requested. For example, many facilities are unable to supply discharge information for the "75 and older" age category. Instead, statistics on older patients are aggregated into the "65-74 years" age category. In other cases, facilities may only be able to provided total statistics without any breakdowns, or they may be able to provide data on number of patients but have no data on number of days patients spent in the facility.

Missing values on the tables which follow are marked with an asterisk (*), and aggregated tables for occupancy rates and average length of stay have been adjusted accordingly.

TECHNICAL NOTES (continued)

Regional Analysis of Data: Data in the following tables are arranged by geographic region. There are six regions--Western, Central, Merrimack Valley, Greater Boston, Southeastern, and North Shore--which correspond to Health Service Areas 1-6 used in previous reports. The Health Service Area designations are no longer used, but the regions they defined continue to be useful for analytical purposes. A listing of Massachusetts cities and town by region can be found in Appendix 2.

ADDITIONAL INFORMATION

The remainder of this report summarizes the bed and discharge sections of the 1988 Annual Hospital Statistical Report through a series of facility-specific utilization tables. The purpose of this publication is to provide basic information on hospital bed and discharge statistics. These tables are intended to serve as reference documents, and little or no interpretation of results is provided.

The summary statistics presented in this data book are based on all Massachusetts hospitals, including federal facilities and specialty hospitals such as the Shriner Burns Institute. When comparing data presented in this report with other sources, it should be remembered that the number of hospitals may vary according to the purpose of the analysis and the definitions used in the data collection process.

The data source from which these tables have been derived (AHSR) is available for further analysis. Data on other facility types (nursing and rest homes, home health agencies, ambulatory care facilities and residential care facilities) are also available. Data requests should be directed to the Health Resources Statistics Unit of the Bureau of Health Statistics, Research and Evaluation, Mass. Dept. of Public Health, (617) 727-8960.

APPENDICES

1988 HOSPITAL BED AND DISCHARGE DATA BOOK

APPENDIX 1
GLOSSARY

UTILIZATION TERMS

Hospital

Any institution, however named, whether conducted for charity or for profit, which is announced, advertised, established or maintained for the purpose of caring for persons admitted thereto for diagnosis, medical, surgical or restorative treatment which is rendered within said institution. (Massachusetts General Laws, Chapter III, Section 52, 1972)

Admission

For acute, chronic and rehabilitation hospitals an admission is any documented entry into a 24-hour facility for the purpose of inpatient care and treatment. For psychiatric hospitals, an admission includes readmissions, returnees from extramural status and transfer or discharge commitments. It excludes returns from absences of seven days or less.

Patient Days

There are two types of patient days used in the preparation of this report: those calculated on a census basis (census days) and those calculated on a discharge basis (discharged patient days).

Census Day

This counts that period of service rendered to inpatients between the census-taking hours of two successive days. The day of discharge is counted only when the patient was admitted on the same day.

Total Census Days

For a hospital, these represent the total patient census provided by each unit in the facility for the entire reporting period - generally 365 days. The figure for total census days is based on the year's summation of individual units.

Average Daily Census (ADC)

This represents the number of patients in the facility on an "average" day. It is calculated as follows:

$$ADC = \frac{\text{Total Census Days}}{\text{\# Days in Reporting Period}}$$

Discharged Patient Days

This refers to the number of days of care, by service, rendered to inpatients who were discharged during the reporting period. This category also includes the days of care rendered to patients who were discharged due to death.

Total Discharged Patient Days

This is the summation of discharge days of the individual units.

Average Length of Stay (ALOS)

This is the average duration of inpatient stay in a facility. It is calculated as follows:

$$\text{ALOS} = \frac{\text{Total Discharged Patient Days}}{\text{Total Patients Discharged}}$$

(The two types of patient days differ in terms of time used in their recording. For example, Hospital A has a reporting period of October 1, 1987, through September 30, 1988. John Smith was admitted as an inpatient on September 1, 1987, and discharged on October 15, 1987. On a discharge basis, Mr. Smith would represent 44 patient days of care, but, on a census basis, he would account for only 14 days (October 1 - 14) of care.)

For short-term services, the results of computations involving patient days (such as average length of stay) will vary little regardless of the type of patient day used. For long-term facilities, however, census days must be used to calculate the average daily census and occupancy rates. Discharged patient days should be used to calculate the average length of stay.)

Beds

Licensed Bed Quota

This is the total number of hospital beds the facility is authorized to operate by the licensing authority.

Operating Bed Capacity

The number of beds staffed and ready to receive inpatients.

Beginning and End Beds

The number of operating beds in the facility on the first and last day of the reporting period.

Mean Beds

These are determined by dividing the sum of the daily operating bed capacities by the number of days in the reporting period.

Occupancy Rate

The percent of beds occupied, on the average, during the reporting period. It is calculated as follows:

$$\text{Occupancy Rate} = \frac{\text{Total Census Days X 100}}{\text{(365) Mean Operating Beds}}$$

(In short-term services, discharged patient days may be used to calculate occupancy rates if census days are not available.)

ACUTE HOSPITAL TERMINOLOGY

Acute Hospital

A facility which provides general and specialized medical and surgical care to inpatients and in which 50% or more of the patients spend less than 30 days. Maternity and pediatric hospitals are included in this category. Beds in acute hospitals are generally organized into the units listed below:

Medical/Surgical Unit

Beds designed for short-term adult medical/surgical patients. All medical/surgical subspecialties are included here unless specifically listed elsewhere or specifically designated as rehabilitation beds.

Intensive Care Unit (ICU)

A specially designated hospital unit in which special equipment and skilled personnel are concentrated for the care of seriously ill patients requiring immediate and continuous attention. In addition to general purpose medical/surgical ICUs, many hospitals have specialty units which include the following: separate medical and surgical ICUs, pediatric and neonatal ICUs, coronary care units, respiratory ICUs, and special burn care and transplant units.

Pediatric Unit

A unit with beds for short-term pediatric care (less than age 15). This includes cribs or bassinets unrelated to the maternity service. Facilities which provide pediatric care exclusively report all beds and utilization statistics under the "pediatric" heading except for distinct bed complements designated for rehabilitation, psychiatric or long-term care for children or adolescents.

Maternity Unit

All beds located within the maternity unit regardless of whether used for maternity or clean gynecology. Bassinets and newborn statistics are not included in the maternity data.

Psychiatric Unit

Beds designated for a separate and distinct inpatient psychiatric unit.

Rehabilitation Unit

Although rehabilitation services are an integral part of all patient care, only beds designated to a distinct unit which is staffed and equipped for the primary purpose of providing inpatient rehabilitation, i.e., coordinated multidisciplinary physical and restorative services, are included in these statistics.

Long-term Care Unit

A long-term care unit within an acute hospital includes the following: a unit set aside as a skilled nursing facility (SNF or Level II) and certified as such for participation in Medicaid or Medicare; a unit set aside as an intermediate care facility (ICF or Level III) and certified for participation under Medicaid; a unit set aside as a residential care facility (RH, RCF or Level IV) of a chronic care unit where the average length of stay is 30 days or more. Excluded are rehabilitation or psychiatric units specifically defined elsewhere.

CHRONIC AND REHABILITATION HOSPITAL TERMINOLOGY

Chronic and rehabilitation hospitals

Included are those facilities providing skilled nursing and rehabilitation services to post-acute or chronically ill patients. The majority of these patients stay 30 days or more and require a greater concentration of equipment, services and skilled personnel than can be provided in a Level I/II skilled nursing facility. Beds in these facilities are generally organized into the units listed below:

Adult General Long-term Care Unit

This includes all generalized chronic disease beds designated for long-term adult inpatients. Any specialized units for particular diseases, physical conditions or amount of care required are listed under "specialty" long-term care.

Pediatric or Adolescent Inpatient Long-term Care Unit

All generalized chronic disease beds designated for children or adolescent inpatients (less than age 15) are included here. Specialized units which are specifically designed and listed under "specialty" long-term care are listed separately.

Medical/Surgical Unit

Included here are beds designated for acute episodes of chronic disease or other medical conditions necessitating a high level of medical care or surgery. This unit may be relatively short-term, but its use is generally reserved for inpatients of the chronic or rehabilitation hospitals.

Rehabilitation Unit

A unit within a chronic disease hospital with the same characteristics as a rehabilitation unit in an acute care hospital.

Skilled Nursing Unit

A service which provides continuous skilled nursing care and restorative and therapeutic services to patients. These patients require more intensive nursing care than that provided in intermediate nursing units.

Intermediate Nursing Care Unit

A service which provides routine nursing services with periodic utilization of skilled nursing, restorative and other therapeutic services. Patients in these units do not require the constant skilled nursing care provided in skilled nursing care units.

Specialty Long-term Care

Any separate and distinct bed complements for particular diseases, physical conditions or amount of care required by inpatients. Units such as a self-care unit or tuberculosis unit would fall into the specialty category if a distinct bed complement was assigned to each unit.

PSYCHIATRIC HOSPITAL TERMINOLOGY

Psychiatric Hospital

These facilities have their own governing body, own administration, own staff and their primary function is the diagnosis, treatment and rehabilitation of the psychiatrically ill. The staff of these hospitals will include psychiatrists and other physicians who assume clinical responsibility for all patients with a primary diagnosis of psychiatric disorder. This category includes facilities which treat mild nervous disorders and are licensed by the Massachusetts Department of Public Health. Beds in these hospitals are generally organized into the following units:

Adult Psychiatric Unit

Beds designated for a separate and distinct adult psychiatric unit.

Pediatric Unit

Beds designated as a separate and distinct unit for children and/or adolescents (less than age 15) with psychiatric disorders.

Adult General Long-term Care Unit

This includes all generalized chronic disease beds designated for long-term adult inpatients. Any specialized units for particular diseases, physical conditions or amount of care required are listed under ''specialty'' long-term care.

Pediatric or Adolescent Inpatient Long-term Care Unit

All generalized chronic disease beds designated for children or adolescent inpatients (less than age 15) are included here. Specialized units which are specifically designed and listed under ''specialty'' long-term care are listed separately.

Medical/Surgical Unit

Included here are beds designated for acute episodes of chronic disease or other medical conditions necessitating a high level of medical care or surgery. This unit may be relatively short-term, but its use is generally reserved for inpatients of the chronic or rehabilitation hospitals.

Rehabilitation Unit

A unit within a chronic disease hospital with the same characteristics as a rehabilitation unit in an acute care hospital.

Substance Abuse Unit

A separate and distinct unit for patients in need of detoxification from alcohol or drug abuse.

Alcohol and Drug Rehabilitation Unit

A separate and distinct unit for inpatients requiring physical recuperation, treatment and/or intensive psychosocial rehabilitation as a result of alcoholism or drug dependency.

Physical Rehabilitation Unit

Beds within the psychiatric hospital with the same characteristics as a rehabilitation unit in an acute hospital. These beds are generally reserved for inpatients of the hospital.

Skilled or Intermediate Nursing Units

Beds designated to provide skilled or intermediate nursing care but generally reserved for inpatients of the psychiatric hospital. These units have the same characteristics as those defined for chronic/rehabilitation hospitals.

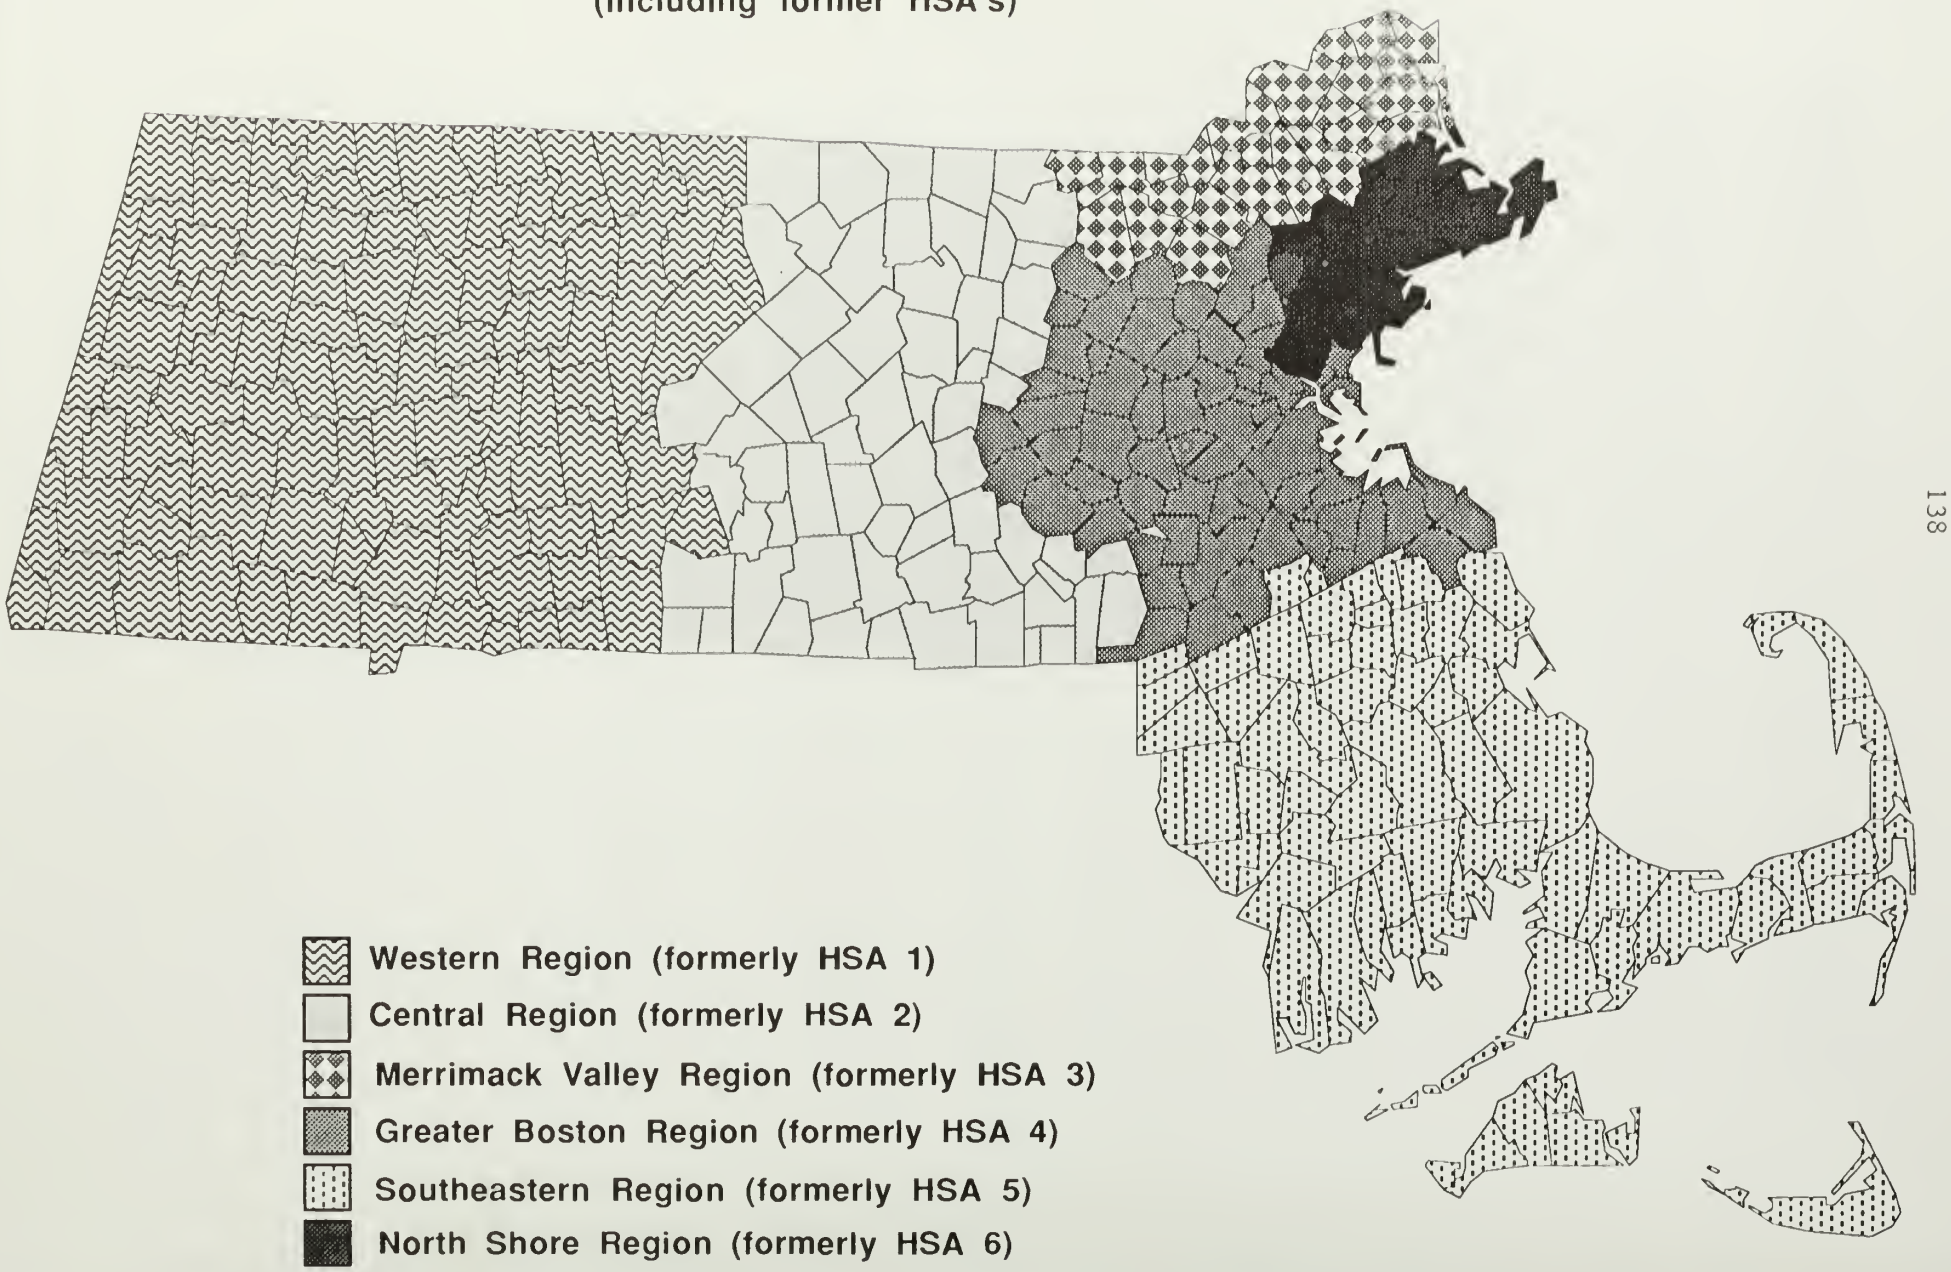

Chronic Care Unit

A specially designated unit for patients with chronic conditions. This unit is generally reserved for inpatients of the psychiatric hospital. The characteristics of this unit are similar to those described for acute hospitals.
